Altering plant characteristics, useful for producing plants for enzyme or pharmaceutical production comprises modifying in a plant, expression of one or more nucleic acids and/or modifying level or activity of one or more proteins.

Claim 1; SEQ ID NO 944; 134pp; English.

This invention relates to a novel method for altering one or more plant characteristics. Specifically, it refers to identifying genes that are upon down-regulated in transgenic plants overexpressing the heterodimeric ESFA/DPA transcription factor of Arabidopsis and using these sequences to alter plant characteristics accordingly. The present invention describes generating transgenic plants for the production of growth regulators, enzymes, therapeutics, pharmaceuticals and animal feed products, where the altered plant characteristics are selected from increased yield or biomass, enhanced survival capacity, stress tolerance, plant architecture

```
or physiology, altered endoreduplication, biochemistry, signal transduction, storage lipid mobilisation and/or altered photosynthesis, each relative to the corresponding wild type plants. Accordingly, these sequences can also be useful as positive or negative selectable markers during transformation of cells or tissues. The identified genes play a role in a variety of biological processes such as DNA replication, cell wall biosynthesis, nitrogen and/ or carbon metabolism or they function as transcription factors. This polypeptide sequence is thale cress protein expressed by a gene upregulated 1.3 fold or more in plants overexpressing the EZFa/DPa transcription factor, given in an exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   61 NVVACAGVCRSWRILITKEIVAVPEFSSKLTFPISLKQSGPRDSLVQCFIKRNRNTQSYHL 120

The invention relates to Arabidopsis TUBBY-like proteins (TLP) and their corresponding nucleic acid sequences. The invention also relates to a transformed cell or a transgenic plant containing TLP nucleic acid and a transformed cell or a transgenic plant lacking TLP nucleic acid and a polypeptides and nucleic acids are useful for producing transgenic or transformed cells or plants having higher tolerance to salt, chilling, pathogens, oxidative stress or water-deficit. The present sequence is the Arabidopsis thaliana TLP 9 protein.

Sequence 380 AA;

New isolated Arabidopsis TUBBY-like proteins, useful for producing transgenic or transformed cells or plants having higher tolerance tsalt, chilling, pathogens, oxidative stress, or water-deficit.

2005-080955/09.

                                                                                                                                                                                                                                                                                                                                                                                                              ઠે
                                                                                                                                                                                                                                                                                                                                                                                1
                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to novel plant transcription factor proteins (I) and nucleotide sequences (II) (ADOS1534-ADOS378). The sequences can be used to produce transgenic plants, which overexpress (II), where the transgenic plant has an altered trait as compared to a conformation in altered trait selected from increased tolerance to abjoint stress, increased permination in cold, increased tolerance to abjoint stress. C increased permination in heat, increased tolerance to freezing conditions, grammation in heat, increased tolerance to freezing conditions, increased tolerance to freezing conditions, increased tolerance to diations, increased tolerance to diagram, increased tolerance to multiple fungal disease and particularly Erysthe, Fusarium and Botrytis, increased tolerance to multiple fungal pathogens, increased tolerance to multiple fungal pathogens, increased tolerance to multiple fungal pathogens, increased tolerance to multiple fungal pathogens, increased tolerance to multiple fungal pathogens, increased tolerance to multiple fungal pathogens, increased sensitivity to ABA, increased tolerance to multiple fungal pathogens, increased sensitivity to ABA, increased tolerance to multiple fungal pathogens, increased tolerance of multiple fungal sensing, increased tolerance continue, altered sensitivity to ABA, altered sensitivity to ABA, cincreased sensitivity to ABA, altered sensitivity to ABA, altered sensitivity to ABA, altered sensitivity to ABA, altered sensitivity to ABA, altered sensitivity to ABA, increased long and the control of altered fungal pathogens, altered sensitivity, altered send interest send of altered development, altered send pase endiance, altered send pase endiance, altered send proteinment, altered send proteinment, altered send protein content, altered send protein content, altered send protein content, altered send protein content, altered send protein content, altered send protein content, altered send protein content, altered send protein content, altered send protein content
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    61 GWPSRRSVVACAGVCRGWRLLAMNETVVVPEISSKLTFPISLKQPGPRDSLVQCFIKRNRI 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                55 DWPSRRNVVACAGVCRSWRILTKEIVAVPEFSSKLTFPISLKQSGPRDSLVQCFIKRNRN 114
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               54
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                       New recombinant polynucleotide encoding transcription factor polypeptides, useful for producing transgenic plants with advantageous properties compared to a reference plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               || |||: |||||||||||||

The invention relates to Arabidopsis TUBBY-like proteins (TLP) and their corresponding nucleic acid sequences. The invention also relates to a transformed cell or a transgenic plant containing TLP nucleic acid and a transformed cell or a transgenic plant lacking TLP nucleic acid. The polypeptides and nucleic acids are useful for producing transgenic or transformed cells or plants having higher tolerance to salt, chilling, pathogens, oxidative stress or water-deficit. The present sequence is the Arabidopsis thaliana TLP 11 protein.
                                                                                                                                                                                                                                                                                                                                                                     'n
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   123
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120

```
This invention relates to novel isolated plant nucleic acid molecules, or variants thereof, that encode transcription factors. Specifically, it refers to transcription factor proteins that are capable of binding to DNA in order to regulate gene transcription and gene expression in a plants, in particular Bucalyptus grandis and Pinus radiata. The present invention describes DNA constructs containing DNA encoding a transcription factor that regulates the promoter, which is operably linked to the desired nucleic acid to be expressed. It further provides transgenic plants expressing a transcription factor that confers a trait of the plant such as increased drought, salt or disease tolerance, height change, enhanced cold/ frost tolerance, enhanced color, health and nutritional characteristics, as well as improved taste, starch composition, flower longevity and germination, amongst others.

Composition, flower longevity and germination, amongst others.

Composition, such plants that are successfully transfected with a DNA construct can be characterized by a difference in flower color, petal or leaf shape and size, aroma or plant height. This polypeptide is a plant transcription factor protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 EVLVKIEASE-GSWPSRKSVVACAGVCRSWRHLVKEIVKVPEVSGILTFPISVKQPGPRE 119

This invention relates to novel isolated plant nucleic acid molecules, or variants thereof, that encode transcription factors. Specifically, it refers to transcription factor proteins that are capable of binding to DNA in order to regulate gene transcription and gene expression in a plants, in particular Eucalyptus grandis and pinus radiata. The present transcription factor that regulates the promoter, which is operably transgenic plants expressing a transcription factor that regulates the promoter, which is operably ransgenic plants expressing a transcription factor that confers a trait to the plant such as increased drought, salt or disease tolerance, height change, enhanced cold/ frost tolerance, enhanced color, health and nutritional characteristics, as well as improved taste, starch composition, flower longevity and germination, amongst others.

Composition, flower longevity and germination, amongst others.

Composition are successfully transfected with a DNA construct can be characterized by a difference in flower color, petal or leaf shape and size, aroma or plant height. This polypeptide is a plant transcription factor protein sequence of the invention.
                  plant, transcription, gene regulation, gene expression, transgenic plant, drought resistance, disease resistance, salt tolerance, cold tolerance; freezing tolerance, flowering, flavor enhancer, flower color.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New polynucleotides isolated from plants encoding transcription factors, and polypeptides encoded by such polynucleotides, useful for regulating gene transcription and gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Connett MB, Emerson SJ, Frost MJ;

This invention relates to a novel method for altering one or more plant characteristics. Specifically, it refers to identifying genes that are up - or down-regulated in transgenic plants overexpressing the heterodimeric E2Fa/Dpa transcription factor of Arabidopsis and using these sequences to alter plant characteristics accordingly. The present invention describes generating transgenic plants for the production of growth regulators, enzymes, therapeutics, pharmaceuticals and animal feed products, where

biomass, enhanced surrival capacity, stress tolerance, plant architecture or physiology, altered endoreduplication, biochemistry, signal transduction, storage lipid mobilibation and/or altered photosynthesis, each relative to the corresponding wild type plants. Accordingly, these sequences can also be useful as positive or negative selectable markers during transformation of cells or tissues. The identified genes play a role in a variety of biological processes such as DNA replication, cell wall biosynthesis, nitrogen and/ or carbon metabolism or they function as

                                                                                                                                                                            The invention relates to Arabidopsis TUBBY-like proteins (TLP) and their corresponding nucleic acid sequences. The invention also relates to a transformed cell or a transgenic plant containing TLP nucleic acid and a transformed cell or a transgenic plant lacking TLP nucleic acid. The TLP polypeptides and nucleic acids are useful for producing transgenic or transformed cells or plants having higher tolerance to salt, chilling, pathogens, oxidative stress or water-deficit. The present sequence is the Arabidopsis thaliana TLP 3 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                      41

This invention relates to novel isolated plant nucleic acid molecules, or variants thereof, that encode transcription factors. Specifically, it refers to transcription factor proteins that are capable of binding to DNA in order to regulate gene transcription and gene expression in a plants, in particular Bucalyptus grandis and Pinus radiata. The present invention describes DNA constructs containing DNA encoding a cranscription factor that regulates the promoter, which is operably linked to the desired nucleic acid to be expressed. It further provides transgenic plants expressing a transcription factor that confers a trait of the plant such as increased drought, salt or disease tolerance, height change, enhanced cold/ frost tolerance, enhanced color, health and nutritional characteristics, as well as improved taste, starch composition, flower longevity and germination, amongst others.

Composition, flower longevity and germination, amongst others.

Composition, flower longevity and difference in flower color, petal or leaf shape and size, aroma or plant height. This polypeptide is a plant transcription factor protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      215
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  100 PRDSLVQCFIKRNRNTQSYHLYLGLTJELDDGKFLLAASKLKRATCTDYIISLRSDDIS 159

```

This invention relates to novel isolated plant nucleic acid molecules, or variants thereof, that encode transcription factors. Specifically, it refers to transcription factor proteins that are capable of binding to DNA in order to regulate gene transcription and gene expression in a plants, in particular Bucalyptus grandis and Plans radiata. The present invention describes DNA constructs containing DNA encoding a transcription factor that regulates the promoter, which is operably linked to the desired nucleic acid to be expressed. It further provides transgenic plants expressing a transcription factor that confers a trait to the plant such as increased drought, salt or disease tolerance, height change, enhanced cold frost tolerance, enhanced color, health and nutritional characteristics, as well as improved taste, starch cutritional characteristics, as well as improved taste, starch composition, flower longevity and germination, amongst others. Accordingly, such plants that are successfully transfected with a DNA construct can be characterized by a difference in flower color, petal or leaf shape and size, aroma or plant height. This polypeptide is a plant transcription factor protein sequence of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    요
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                     variants thereof, that encode transcription factors. Specifically, it refers to transcription factor proteins that are capable of binding to DNA in order to regulate gene transcription and gene expression in a plants, in particular Eucalyptus grandis and Pinus radiate. The present invention describes DNA constructs containing DNA encoding a transcription factor that regulates the promoter, which is operably transgenic plants expressing a transcription factor that confers a trait to the plant such as increased drought, salt or disease tolerance, height composition, flower longevity and germination, amongst others.

Accordingly, such plants that are successfully transfected with a DNA construct can be characterized by a difference in flower color, petal or leaf shape and size, aroma or plant height. This polypeptide is a plant transcription factor protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              plant; transcription; gene regulation; gene expression; transgenic plant; drought resistance; disease resistance; salt tolerance; cold tolerance; freezing tolerance; flowering; flavor enhancer; flower color.
                                             invention relates to novel isolated plant nucleic acid molecules, or

This invention relates to novel isolated plant nucleic acid molecules, or variants thereof, that encode transcription factors. Specifically, it refers to transcription factor proteins that are capable of binding to DNA in order to regulate gene transcription and gene expression in a plants, in particular Eucalyptus grandis and Pinus radiata. The present invention describes DNA constructs containing DNA encoding a cranscription factor that regulates the promoter, which is operably linked to the desired nucleic acid to be expressed. It further provides transgenic plants expressing a transcription factor that confers a trait of the plant such as increased drought, salt or disease tolerance, height change, enhanced cold/ frost tolerance, enhanced color, health and contritional characteristics, as well as improved taste, starch composition, flower longevity and germination, amongst others.

Composition, flower longevity and germination, amongst others.

Composition, flower longevity and difference in flower color, petal or leaf shape and size, aroma or plant height. This polypeptide is a plant transcription factor protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      10;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            119
